Navigating Inkscape In this chapter we will cover * Layers * Non-Photoshop image editing software: inkscape * How do Inkscape and Photoshop compare? Inkscape is a vector image editor with hundreds of customizable tools and features, and it's less expensive than Adobe Illustrator. If you have to do bitmap work, such as clipping paths or repeating patterns, it's the better option. Inkscape also has options to print your document. Inkscape uses a scriptable and extensible XML-based language to construct shapes, paths, and other primitives. When you create a drawing, you are creating a tree of nodes and links. The nodes control the shape and location of the graphic elements, and the links are used to join them. Inkscape can even apply a stroke to paths and select the color or pattern to be applied automatically. It supports native transitions and allows you to import SVG or EPS files for vector graphics. Inkscape also has the ability to create standard bitmap images, called raster

I am giving a talk at CPAN::Tutorial at LCA2009 in Lyon (FRANCE) and will be happy if you want to come and support for me. There is a deep relation between several Perl modules and Web Services: XML::DOM, XML::Parser, XML::Simple and XML::LibXML are Perl modules which had more or less a life as a Perl web service. XML::LibXML is probably the most powerful webservice module. Also, Plack::Middleware::XML is one of the most advanced and respected Plack-based Middlewares. I will talk about what is XML::LibXML and why it's almost hidden because of its steep learning curve. I will also explain Plack::Middleware::XML and how this modules allows to encapsulate the webservices interface into a standalone application.

Large bowel cancer and dietary factors. Large bowel cancer is a malignancy of increasing incidence in Australia. In the Pacific region of the world incidence is some 10 times higher than the West. There is increasing evidence that dietary factors contribute significantly to the occurrence of this disease. In this article we discuss the epidemiological aspects of large bowel cancer with emphasis on the role of dietary factors. Although the Australian experience is probably applicable to other Western countries, the international experience cannot easily be applied to the Australian experience. Some of the problems that occur when international dietary data are applied to an Australian population are discussed.

[Phase II study of intermittent administration of cisplatin in the treatment of metastatic squamous cell lung carcinoma]. A phase II study of the efficacy and side effects of continuous versus intermittent administration of cisplatin and vindesine was conducted in 14 patients with metastatic squamous cell lung cancer. On days 1 through 4, patients received a continuous infusion of cisplatin at a dose of 5 mg/m²/day. One week later, a four-day regimen of cisplatin was repeated. Vindesine was administered on days 3 and 5. The objective response rate in the continuous infusion group was 43%, and in the intermittent infusion group, 20%. The difference between the two groups was statistically significant. The mean time to progression of all patients was 8.9 months. The continuous infusion group survived a mean of 17.5 months and the intermittent group 15.8 months. Myelosuppression and nephrotoxicity were similar in both groups. There were two patients who had Grade 4
