AutoCAD 2017 Key Features: Cloud-based File Repository Improved 2D Drafting Tools Improved Color Management and Master Image 3D Modeling Tools Shape Optimization Subset Region Selection Coloring & Style Management Integrated Graphics Plan View Support for XML Types of Templates An AutoCAD template is a digital image of a AutoCAD drawing that is used to create a similar or similar-looking document on the computer. The template is used for standard designs and model parts. Templates are commonly used with AutoLISP, Excel, and some drawing programs such as Visio. Templates can be used for

creating standalone models as well as for adding design elements to an existing drawing. The drawing can be saved as a template file that can be then used to create multiple drawings from the template.

Acquiring AutoCAD Templates

AutoCAD templates are available from the Autodesk website. In addition to the pre-installed templates, additional custom templates are available for use by users. Users can browse through templates available for purchase on the Autodesk website. The drawing can be saved as a template file that can be then used to create multiple drawings from the template.

Saving Templates

To save an image as a template, just place your cursor over an image you wish to use as a template. You can also click the Save icon on the image toolbar to save an image as a template.

Creating a Template File

To create a template file, the image must be imported into AutoCAD. Clicking Import icon from the toolbar opens the Import dialog box.

Alternatively, you can open the template file by clicking on the Template icon on the image toolbar. By default, the imported image will be saved in the “Images” folder on the local hard drive. You can also change the destination of the imported file by selecting the “Location” option.

After the file is imported, the default icon appears next to the name of the file on the image toolbar. To add a custom template icon to the toolbar

a report criticizing Autodesk's method of pricing AutoCAD, in that the license prices are tied to the number of customers who buy the software and are not based on any specific value of the software. The report also pointed out that Autodesk's revenue per user is substantially less than competing products.
