The release of the early 2000s included a major overhaul to the editing experience, which included reworking of the Layers and Dynamic Input Editors. AutoCAD LT 2004 was the last version of the product to be based on the original version of AutoCAD and it was the last version to work on Microsoft Windows systems. It looks like this: This seems to work ok, and the image is rendered on the page, but the jsessionid is not passed to the image because of the way the embedded servlet is generating the url, which looks like this: My servlet is defined as follows: servletContext.getRequestDispatcher("/profile/image").forward(request, response); I am wondering if there is a way to forward the request to the image url but have the jsessionid available to the image, or if I have to pass the jsessionid from the grails controller somehow. A: Not sure why you'd need to, but you could use the session in a hidden form field and read it in your image request, something like:
