What's New In GSEGYView?

SEG-YView is a handy application that allows you to generate a graphical representation of the seismic data from a SEG-Y file. The program can be useful for the engineers and researchers that work in geophysics and other related fields. Before generating the graph you need to select the criteria by which to sort the data and the color palette. Operating Systems: Windows 95/98/NT/2000/XP/Vista Software Requirements: 1) The use of MIDI sequencing of data Limitations: 1) The program is licensed per user for a single user, therefore, multiple logins will not be supported. 2) The program does not support multiple simultaneous accounts, but it does support multiple instances of the application. Usage: The program can be run by opening the.exe file in your main directory. Step 1. Run SEG-YView.exe. Step 2. Load a SEG-Y file. Step 3. Select the data you wish to have analyzed and click the Generate button. Step 4. Wait until the graph generation is complete. User Interface: The main window contains three main sections: 1) Toolbar (view, select, zoom in/out, save) 2) List of analysis regions 3) Graph The list of analysis regions is controlled by a checkbox column in the table in the Graph window. The selection of a region is done by clicking on the checkbox for the region. When generating a graph the region is highlighted and all the points that fall within the region will be displayed in the graph, unless you deselect the region after you have created the graph, or select another region. If you deselect the region you will no longer see the points in the graph. Each graph is saved as a.gif image. In the Graph window the regions are represented by squares on the graph. The label for the region is the name of the.seg file for the region. The color of the squares is a unique color representing the region. Screenshot: Features: 1) Remove Points. 2) Generate new image. 3) Save as.gif image. 4) Save as.jpeg image. 5) Open.seg file in NotePad. 6) Auto-scale. How to use: 1) The application is a stand alone application, so you can run it from anywhere. 2) The.seg files that
