KEYMACRO is a free software that simulates a physical keyboard. For the user there is no difference from a real keyboard and the interfaces of the programs (see for example, Windows keybaord) can be used. The only difference is that all the program keys, even the ones with modifiers, can be customized for a different function. The program uses a window style design. The user can choose a background and a foreground color, whether he wants the caption bar to be displayed or not and whether the program responds to the click of the mouse or it just shows a simple cursor while waiting for the user to act. The program allows eight custom text colors. In addition, this program is built with an interface for the amateurs, because the most difficult part of developing a program is to allow the user to customize all the program options to the exact requirements of his needs. Limitations: ☷ This program cannot export to MIDI file Ampersand Magic Lite Description: Ampersand Magic Lite is a free software that simulates an electronic keyboard in a conventional way. The program works similarly to Microsoft Windows system: the program keyboard is similar to the keyboard in the computer, even with its physical buttons. The program supports different languages. You can also type your text in any notepad. The program can import files created by Ampersand Magic Lite version 1.0, but not files created by the previous version. The compatibility

version of the program is 1.0.0. Limitations: ☐ Cannot export to MIDI file Keyboard Dump Description: Keyboard Dump is a utility for dumping keyboards (so-called "Keyboard Profiling") from any Keyboard. The program profiles a keyboard and dumps its data to a binary file. Here are some key features of Keyboard Dump: ☐ The program can dump keyboards that have been created by the Ampersand Magic Lite version 1.0, but it cannot dump keyboards created by the previous version. ☐ The program can profile any keyboard, regardless of the keyboard manufacturer or the hardware that it is running on. ☐ The program can dump keyboards for Windows operating systems (3.1, 3.11, 95, 98, NT, 2000, ME, XP, VISTA). ☐ The program can dump keyboards for Apple Macintosh operating systems (2.1, 2.11, 3.1, 3.2, 4.0 77a5ca646e

□ The program represents the melody in a structure that is analogue to the structure of common speech. There are words (motives), phrases, sentences. Such an approach allows a simple and effective algorithm to be applied to the composition of melodies. □ The program implements twelve four methods of motive development. Some of them are listed here: variation; inversion; repetition; sequence and so on. These methods similar to the visual effects in graphical editors. The program suggests the 'theoretically correct' algorithm for the melody creation. The main advantage of the algorithm is: we take some existing part of a melody (motive or phrase) and apply the methods of motive development (for example, variation) to this motive of phrase to create a new motive or phrase of the melody. □ The program knows the most commonly used triads and seventh chords of the key. The program represents the chords in a four-voice form. The names of the voices are soprano, alto, tenor and bass. Any chord has many variants of an arrangement. For example: any chord note can be placed in the first position of the arrangement. The chord notes can be arranged adjacently (tight arrangement) or remotely (wide arrangement). The user can choose both the type of the chord and the arrangement of the chord. □ The program understands the logic of the functional motion. That is, the program knows the rules, which describe how and in what sequence the chords appear in the chord progression. On each step, the program suggests only those chords, which are suitable for the current position in the chord progression. □ The program understands the 'voice-leading' rules. The rules define how one chord notes transform to another chord notes. The chord progressions, where these rules are used, sound very harmonious. □ The program contains demo-scripts, which show how to use the program, and how to compose melodies. □ The program has an option that exports the melody to a midi (*.mid) file. The exported file consists of three tracks: melody, chords, bass. You can import this file to any midi sequencer or style arranger to create a complete tune. □ Can not export to wav file □ Cannot export to MIDI file □ Cannot export to m4a file □ Cannot export to midi file □ Cannot export to wav file
