This article presents and compares the results of many studies that were conducted on the subject of complex regional pain syndrome. The topic of "differential diagnosis," which is mainly discussed in this article, is not a part of the definition of complex regional pain syndrome. We hope that the information presented in this review will be useful for clinicians, in particular for those who deal with patients with complex regional pain syndrome, to make more comprehensive decisions regarding the treatment modalities used.Q: Python and coroutines: How to abort coroutines from for loop? I am using python3.6.2 and I would like to understand why my code does not work as intended. A file or folder can be attached to a command prompt by double clicking on the file in the Windows File Explorer or folder in Windows Explorer. Press the F5 key and open the command prompt and navigate to the directory of the file. (step-by-step) Open a command prompt window by opening the Start menu, clicking on All Programs, Accessories, Accessories, Command Prompt and clicking on the Command Prompt shortcut. Change directory to the folder containing the file you want to attach to the command prompt. If the file does not exist, make sure to navigate to the right folder first. Tip: Right Click on any folder on the Windows desktop to open the context menu. Then click on 'Go to Folder'. Then type in the name of the folder you want to browse to. In order for the file to be attached and extracted in the same folder as the original file it must already exist when you do this. If the file does not exist yet, navigate to the folder and create the file. Type the following command `att **path** **to** **file**` att = attach path = the path to the file you want to attach Note: The "\*" before the path will tell the command that the path includes the path to the file, so it does not need to be typed in. file = the file name to attach Tip: By default the path has a "\*" in it, so you could not see the path if you don't type in the path. So just replace the "\*" with the path. Example: `att D:\document`
