Don't forget to register at The National Highway Traffic Safety Administration (NHTSA) has proposed a new standard for smartphones. The new rule requires that "touch screen control elements" on a driver's side seat must be at least 1.4 inches high. The proposal is out of the coming September. In order to comply with this rule, auto makers have to make some adjustments to their car seat designs. The seat has to increase its height from 2.5 inches to 3 inches and have a 0.8-inch thick display with a minimum resolution of 300 ppi. Other related specifications would also apply to the car seats. In the event that an auto maker fails to make the necessary adjustments, the auto maker could be held liable for any injury or death resulting from the driver. However, these cases have not been reported as of yet. According to the NHTSA, approximately 62,000 U.S. drivers died in crashes that involved distracted driving. Approximately 22,000 of those people died in crashes that involved distracted drivers using smartphones. The proposed regulation would apply to all new cars and trucks by 2021. In the meantime, auto manufacturers have started to prepare for this new rule. They are designing a series of new automotive features that would ensure compliance with the upcoming regulation. For instance, the Italian manufacturer Lamborghini has revealed that they have developed a new tablet-like device that fits between the driver and the head rest. The device features a car seat's back, which would minimize the distraction of reaching for the device. The device would also feature voice control. In addition to this, Ford has announced that it has developed a Smartphone Integration Control Center that would automatically turn off the phone when the car is moving. As the new year approaches, the auto industry is worried about the future of the American automotive industry. Some believe that the proposed regulation could be devastating for car manufacturers. Many of the auto makers have said that the new regulation will increase the cost of manufacturing and deploying a new vehicle. What's New in the?

From the Publisher: Rapidly send and incorporate feedback into your designs. Import feedback from printed paper or PDFs and add changes to your drawings automatically, without additional drawing steps. Product Updates: AutoCAD is the most widely used computer-aided drafting (CAD) application. Most of us use AutoCAD as an essential part of our daily work routine, whether we are creating a blueprint or a sales order. With every passing year, AutoCAD is evolving to meet our changing needs and become an even more efficient and powerful drafting tool. As the de facto standard for 2D and 3D drafting and design, AutoCAD's capabilities for creating and maintaining 2D and 3D objects have grown exponentially, providing our users with the ability to communicate more clearly, collaborate more efficiently, and design smarter. AutoCAD's functions, features, and functions are well documented in the user and online manual. All functions are available on the menu bar and in the Quick Access Toolbar, as well as on the ribbon toolbar and in the ribbon tabs. By default, the user manual is open when you start AutoCAD, but you can also locate the manual from the Help menu, the toolbar buttons, or the drop-down Help menu. AutoCAD's default settings are convenient for everyday use, but you can customize AutoCAD to suit your work habits and environment. You can modify these settings as you go, without taking a break from your work. AutoCAD's customization options allow you to fine-tune your software to better meet your personal and work needs. Features that are new in AutoCAD 2023: AutoCAD supports precision multipart geometry (PMG) objects and strokes, allowing you to define objects by combining multiple shapes and/or line types. (P•PMG objects and strokes are a more efficient way of defining objects, since only one object definition is used and the other elements are implied rather than explicitly defined in multiple parts of a drawing.) (P•The PMG objects and strokes capability provides an easier way to work with groups of similar objects. (For example, you could define a group of line objects that all have the same or similar ends.) •You
