CoolCover is a Windows application for retrieving the cover images and artwork for MP3 files on your hard drive. You can also use it to add artwork to your own music files. CoolCover organizes your music files by artist and album and allows you to view the cover images in a thumbnail view. If the music is not tagged with artwork or cover images, CoolCover will retrieve and display the artwork or cover image itself. CoolCover Requirements: Windows operating system (Mac OS X version available separately) Current version: 1.0 Total size of installed file: 3.5 MB CoolCover Uninstaller (Windows version only) Free, simple and safe application for removing CoolCover from your computer. Cover Art Extractor (Windows version only) Free, easy-to-use and safe application for extracting the cover art from your MP3/WMA/WAV/OGG/OAR/FLAC and other audio file formats. CoolCover in Deep Detail (Windows version only) Very detailed description and review of CoolCover. It's a shame but CoolCover didn't work for me. Although it was fast to install and run, it didn't find any artwork at all. No point in using such a nice looking application, when it doesn't work. There are several applications like Coolcover out there, which allow you to find cover art for MP3 files. However, most of them simply scan online databases for the information which is stored in their respective cover art information databases. In that case, Coolcover is the only one which is still indexing your music files on the hard drive. After I installed the application, I was able to quickly retrieve cover art for my MP3/WAV/OGG/OAR/FLAC/M4A and all

other audio files that have art tags. The application has a simple interface which is a plus. There are no complicated controls or buttons to learn or even operate, so it should be easy to get started. The main disadvantage of the software is the fact that it doesn't allow you to add your own cover art to your audio files. Instead, it allows you to simply replace the artwork retrieved from the online database with the information stored in your music files' ID3 tags. All in all, Coolcover is a simple application which makes it easy to retrieve cover art for your audio files. It also allows you to edit the information stored

KeyMacro is an application that allows you to manage macros and keys in the Powerline Editor. With it you can create your own macro commands or keystrokes that can be bound to actions or keystrokes. Using the pre-defined Macros or keystrokes, you can automate repetitive actions or perform quick tasks. You can easily record your own actions or keystrokes and use them for later use. This tool can be great if you do things the same way all the time and don't want to get tired of it.

Powerline Editor Description: The Powerline Editor is a plugin for Apple's TextMate and TextWrangler that allows you to edit text, styles, colors and symbols, including most of the keystrokes, while being in a position-aware mode, where your text's location is taken into account.

disCoverJ is a streamlined piece of software that makes it very simple for you to find suitable cover artwork for your MP3 files and albums. Probably the first thing you need to know about disCoverJ is the fact that it comes with batch processing abilities. This means that you can load as many MP3s as you like and the app sequentially searches for their artwork. Searches and finds cover artwork for your music files with only a few clicks At this point, the tool searches online for information and artwork for you music on music-related services like iTunes, Deezer, Spotify, Discogs, Gracenote, Amazon, Google and even on your computer. Once the searching process is completed, the app displays the statistics via a pie chart. If the app finds suitable artwork and cover images for your music, it automatically saves them in each MP3's ID3 tags. Single purpose and efficient

application The application's simplicity is its strong point, as it makes it very manageable but, ironically, it is also its weak point. The large majority of tagging apps out there can help you retrieve cover photos and artwork for your MP3s just as well, but can also provide you with other features that are simply out of disCoverJ's reach. All in all, disCoverJ is a simplistic software solution for retrieving artwork and cover images for your MP3s. The application comes with a streamlined interface and a smooth learning curve, making it ideal for all categories of users. KEYMACRO

## What's New in the DisCoverJ?

RitaMeter is a program that will allow you to graphically display your computer's CPU usage, memory utilization, network traffic, disk space and even your web browser's traffic. What's more, this program is totally free! Key features: Highly customizable graphs Lack of ads, popup ads and anything else When used in conjunction with your system's Hardware Monitor, it's a useful tool for quickly and easily checking the status of your system, no matter what level of experience you may have. Simple and functional interface Although its interface is very simple, and in the words of the author of the software, "...you don't need to know how to use this program to use it", it is still not completely user-friendly and even experienced users might find it complicated at times. Despite this, the user interface is very intuitive, as you can start using it from a single click. It features a simple tab-based GUI and it is also possible to add any custom list of items you like, creating a database of your preferences. A reference point for high system activity Thanks to its high system activity graphs, you will always be sure of knowing what exactly is causing your computer's overload. Keep in mind that the program features a built-in help and a built-in "what is my PC saying" help feature. Simple to use, effective and clean In a nutshell, all you need to do is start the program and then select the monitor or main screen you want to monitor. Once you have done this, the program automatically starts displaying the required graphs. As you can see from the screenshots provided, all of the graphs you can find are highly customizable. That being said, there is nothing wrong with leaving them as they are, especially if you just need to quickly find out the status of your system.
