A user-interface graphical component, Autodesk® DWG® 2010, and the DWG 2010 translator applet, support the creation of DWF (AutoCAD's native DWF format) files, which allow users to view and interact with AutoCAD files on other Windows operating systems, such as PC-based and mobile operating systems. They are intended for users to work and view AutoCAD files on other Windows operating systems (including mobile devices), when the AutoCAD file is opened in Autodesk® DWG 2010. File formats Autodesk® DWF Autodesk® DWF is a native CAD file format. AutoCAD DWG files, and DWF files generated from those files, can be opened in Autodesk® DWG 2010. AutoCAD DWG 2010 can open a DWF file from the Internet, in which case the contents of the file can be viewed, modified, and printed. Also, a DWF file can be opened directly in AutoCAD or AutoCAD LT without the need for DWG 2010. AutoCAD DWG and DWF files can be opened directly in AutoCAD LT and AutoCAD LT for Windows or AutoCAD LT for Windows Mobile Edition. This capability is not available with the free AutoCAD LT files that are available on the Internet. Support for DWF files is enabled for AutoCAD LT for the Web and for AutoCAD LT for Mac. DWF files are not yet supported for the Web for AutoCAD LT for Web and for AutoCAD LT for Web on iPad. If you have selected the capability "Display CAD files created in DWG 2010 in the DWG Viewer" in the Edit>Options dialog box, a DWF file can be opened directly in the DWG Viewer. AutoCAD XML (ACX) AutoCAD XML (ACX) is a native XML format. ACX files can be opened in AutoCAD LT or AutoCAD LT for Windows or AutoCAD LT for Windows Mobile Edition. ACX files can be opened directly in AutoCAD LT or AutoCAD LT for Web. The DWG 2010 translator applet provides users the capability to open ACX files directly from the Web in AutoCAD LT for Web. ACX files are not yet supported for the Web for AutoCAD LT for Web or for

Dynamic Data Exchange (DDE) on Windows and Drag and Drop (DnD) on Mac OS X are also well-supported, allowing a user to exchange data between other applications (e.g. Microsoft Excel) or to drag and drop files or folders. Standards and norms With the introduction of Autodesk Revit in 2007, Autodesk began supporting and promoting a set of standards known as AECLISP. File format standards are defined by the Open Group's ISO/IEC 14500. Autodesk Revit for Architecture use a file format specification that is based on Revit's drawing data exchange (DXF) format and has been incorporated into the ISO/IEC 14490 standard. The ISO/IEC 14490-2:2013 standard defines the file format for vector data exchange. It was updated in October 2013 to include Autodesk Revit-specific extensions to allow mapping between model data and design intent. Autodesk Architectural Desktop, Autodesk Building Design Suite and Autodesk Civil 3D also support the standard definition of shared drawings. This standard is based on AECLISP, the Architecture Exchange Language Interface Standard, and has been incorporated into the ISO/IEC 14490 standard for Vector Graphics Model Data Definition (VGMDD). Autodesk also supports the Autodesk Authoring Framework standard for the sharing of 2D and 3D drawing models in the open Source MIT CAD project Open Design Modeling Language (OpenDML) and 3DVIA VRML. Markup Assisted Drafting: Automatically generate a base drawing for your 2D or 3D model, saving you valuable time and effort when you plan to make a lot of changes to your design. (video: 1:39 min.) Many people don't realize it, but drafting often starts by making a base drawing that represents the parts of your 2D or 3D model.
