your hard disk) environment. Setting up the AV environment After a fast setup operation that needs minimal user assistance, the AV tool creates an icon in the systray and automatically turns on its real-time guard. It downloads the latest virus definitions and asks you to start by running a full system scan to obtain a security assessment of your machine. The main control panel has a simple look and well-structured layout, keeping the overview, scanner, actions, settings, and account details organized in separate areas. Multiple scan modes and quarantine manager There are three scan modes available: quick, full, and custom (folders only). Malware checkups may also be performed on any selected files through the context menu. Plus, scans are scheduled by default. During a scan job, you can check out the full path of the currently scanned item, elapsed time, scanned objects, along with the type of each malware agent detected by ClearSight AntiVirus. Quarantined objects can be permanently removed from the disk or restored to their original location. It's also possible to create a whitelist with files or folders, examine log details with scans and the product's activity, as well as to disable real-time and scheduled scans. Settings can be reverted to default. Performance and conclusion The tool didn't hog system performance during scan jobs in our tests and delivered good results concerning malware detection ratio. The real-time guard quickly quarantined infected files. However, in some cases, some malware files were completely missed by both the real-time guard and on-demand virus scanner (they were immediately picked up by Windows Defender). All in all, ClearSight AntiVirus has straightforward configuration settings for facilitating malware protection. Additional features, such as scheduled scan settings and a web protection module, can be found in the Pro and Premium editions of the tool. ClearSight AntiVirus Description:

I have been using ClamXav for a year and a half. The free version is adequate, but I was ready to upgrade to a paid antivirus and ClamXav kept coming up. Finally I downloaded Bitdefender for free, but was not impressed. It turns out Bitdefender is the same company that produces ClamXav, so I thought I would give Bitdefender a try. My first impression was that the interface was a bit awkward, but I read that it was a beginner's program and I accepted that. Once I got past the learning curve, I found it to be very easy to use, and very fast. The bitdefender interface is very easy to use and very fast. It has many features and provides a very high level of protection. It is a bit more expensive than I'd prefer, but it still performs very well and is an easy solution.
