The success of AutoCAD Crack has seen Autodesk's revenues from this product and its other products in its portfolio grow from \$35 million in 1980 to \$2.6 billion in 2012. AutoCAD is the standard in CAD, publishing, and architectural design industries. History The AutoCAD story began in 1981, when a group of six engineers working in the Automotive Manufacturing Division at Reynolds Metals formed a team called "Metals Computer" to develop a tool to design tools for the Reynolds manufacturing process. The team, which included future Autodesk executives Steve Van Liew, Scott McCloud, and Reed Dunn, developed the first version of AutoCAD in November 1981, and in December 1982, this version was released to the public. Since the year 2000, Autodesk has opened the platform up to users via open source software. The team recruited Jim Pisarcik to develop the graphic interface. He recruited Steve Kaufmann, a computer science graduate student at Northwestern University, to help him. The result of their joint efforts was a new look that the Autodesk CAD team called "Metals". Steve Van Liew was also instrumental in developing the user interface, providing a user manual for AutoCAD and helping distribute the software. The original CAD package lacked the core features required for a CAD package. It used a mouse for drawing, the user interface was hand-drawn and non-graphic, and a long list of commands were required for the creation of a drawing. By 1985, the company had raised \$20 million and had completed development of its first batch of applications. The company's first customer was the Herstellungs- und Planungszentrum für die Automobilindustrie (Harbourliner GmbH) in Krefeld, Germany. The company launched AutoCAD, with technical assistance from metallurgy research group at the Massachusetts Institute of Technology, in the United States. The first release of AutoCAD was named AutoCAD R75. By the end of the 1980s, AutoCAD sales accounted for approximately 80 percent of Autodesk's revenues. The AutoCAD name was extended to work on and operate on multiple platforms. In October 1990, Autodesk's principal operating company was listed on the New York Stock Exchange. Autodesk, Inc. has grown to the largest company of its type with revenues of \$2
