History of AutoCAD AutoCAD was originally developed to create architectural blueprints by Ron Correa and Keith Brock in 1982, at the University of New Mexico. Correa graduated from the University of New Mexico in 1983 with a B.S. degree in Computer Science. During his sophomore year, Correa worked as a software development intern at the School of Architecture at the University of New Mexico, while completing his undergraduate studies. While working on the development of AutoCAD, Correa realized that it would be an easy project to begin designing for, due to the success of CAD programs already available at that time. Keith Brock (nicknamed as "Brockie" by Ron Correa) graduated from the University of New Mexico in 1982 with a B.S. degree in Computer Science, and worked at the University of New Mexico for 3 years as a software developer. He went on to work at SnapDesign Software, a custom software developer, as a network software developer and as a database developer. In March 1983, the team began developing a scaled down version of AutoCAD for the Apple II series of home computers, and released it in October 1983 as the original AutoCAD. By the end of the 1980s, more than 100,000 copies of AutoCAD 1.0 had been sold. In the beginning, Correa and Brock operated the software development in their spare time, while Brock continued to work for SnapDesign as a network software developer. In 1989, the development of AutoCAD was turned over to the company Autodesk, Inc. (now known as Autodesk, Inc. or Autodesk) to allow for an expansion of the product line. In the beginning, the software development was still done by Brock and Correa in their spare time, and the company was based in Albuquerque, New Mexico. With financial help from Autodesk, Inc., the software development at the time was completely outsourced, and Brock and Correa became the chief software developers at the company. On April 6, 1989, at an all-hands meeting at the New Mexico Digital Graphics Lab, Correa announced that the team was ready to release the first major new version of AutoCAD, and it was available for free download, starting on April 13. Since the date was April Fool's Day, the release was in fact a joke. The first major feature of AutoCAD 2.0 was the software's ability to use Windows 3.x operating systems
