History In 1986 Autodesk began development on AutoCAD, an application to create and edit two-dimensional drawings. This application was originally released as shareware, but in 1990 Autodesk dropped the shareware license and introduced AutoCAD as a registered application for purchase. In 1992, Autodesk sold off the original developer, Design Now, to Corel and released AutoCAD as a wholly owned subsidiary of Corel. By 1993, Autodesk was selling AutoCAD along with many of its other products, including drawing and drafting software, for up to \$2,000 per year. With the introduction of AutoCAD, the earlier MicroStation and MicroPlan products were discontinued. In 1992, the CompuDRAW graphics system was first offered with AutoCAD. In 1992, the first physical distribution of AutoCAD was made in Brazil by a local distributor. In 1994, Microstation was phased out and AutoCAD was offered as a primary replacement. Autodesk came to dominate the global CAD market. On August 1, 1995, Autodesk rebranded the product from CAD to AutoCAD, which would be applied to all of Autodesk's software. In the late 1990s, Autodesk released AutoCAD for Macintosh computers. The price increased from \$200 in 1999. In 1998 Autodesk released AutoCAD 2000, an add-on to AutoCAD 99 for new users. AutoCAD 2000 consisted of a large number of new features and significant improvements over its predecessor, AutoCAD 99. AutoCAD 2000 also added increased integration to Microsoft Windows and OS/2 and was introduced for the first time for the Macintosh and Linux platforms. In 1999, Autodesk acquired the Siggraph startup Axisys, which made the Design Review technology available in AutoCAD 2000.
