## AutoCAD Crack

Obtain your activation code from the Autocad site: Note: the keygen can be found in the bottom right corner of the Autocad home page. Run the "AutoCAD.exe -Keygen" How to install AutoCAD: A: You will need a version of autocad from the mac App store. You can download a free trial from the app store: A: I think that there is a bit confusion here because the key that you need for this activation is the same that Autocad uses when you register the software to your company. The key is of 6 digits. You don't need to have this key on your computer. All you need is: - your company name (not the company you are going to use it, but the company you will register Autocad) - the serial number of the computer you are going to use Autocad (This is what shows up on the box when you are going to buy the software) - and the activation key of your company (which is the same that you will use to register Autocad) And remember that this key should be a 6-digits code. Once you have this key you just need to put the entire code in the activation part of the setup of Autocad. If you can't find the code for your company, visit this link and there you will find the code. Q: More elegant way to split the string list I have list like this: List values = new List{"1,2,3,4,5,6","1,2,3,4,5"}; I want to get the numbers 1,2,3,4,5,6,1,2,3,4 and remove the quotes, split them, and store them in another list. A: This should work: var numbers = values.Select(x => x.Split(',').Select(x => x.Trim()).
