The year is 1970, and the world is changing. Animals used to be free, but now they all live in cages. You've heard of animal activists, but the lock-cages movement is gaining popularity. No one knows where the animals go or why, but a lot of money is going into the caging industry. People on both sides of the issue need to be aware of each other. We're out here to bring the world to these cages. Get to know wild animals, and help them find a way to be free. Join the Drop Safari: Jump into a series of challenges and quests. Swap animals to take on each one. Collect the [animal] and unlock a few new ones. Play through each safari in its unique environment and make sure to visit each animal before it becomes a memory. Unlock new places to go. Pop in as many animals as you can in each level. In Safari Drop, animals from far away planets have come to earth and now all animals are free! The town of Mega Cap City is in peril! Hundreds of citizens have been kidnapped by an army of robots! They were all carrying items, so our hero has a job to rescue them. Drive a giant robot! Spin and jump to rescue your neighbors! Try to move as many citizens as possible on the road! - Gigantic 2D platformer! - Dodge and return: it's a race to save your city! - Vibrant graphics and music - 60 collectible characters - 60 hand-drawn levels

About This Game: Mega Cap City is under siege! Robots have abducted all the citizens, but one heroic robot is determined to save as many as possible. They were all carrying items, so he has a mission to save them all. Drive a giant robot and get to work! Collect items and enemies to unlock new stages. All characters appear in each stage, no matter where you enter from. Complete each stage as fast as possible to score as many points as possible. The fastest time you can achieve will be reported as your online high score. Every stage is hand drawn by our artists. Feel the vivid depth and technical detail. Hundreds of carefully rendered animations make Mega Cap City an experience you won't forget. Caravan Safari is a journey into an exotic, ancient world filled with sun, sand, and spectacular animals. Explore multiple habitats and

**Triplet state character in the barrierless photoinduced electron transfer in the semiquinonoid triplet state of thiadiazole-based push-pull dyes. The photochemical properties of several semiquinonoid phthalimides are investigated by application of the Marcus theory of electron transfer. Reversible and irreversible electron transfer processes, located in different energy regimes and having different quantum yields, were identified and separated. Variation of the driving force in well-defined energy regions unmasks the ground state character of the triplet state and thus the nature of the electron-donating moiety, the phosphine. These phthalimides show different ground state probabilities, ranging from 0.1% to 100%. A photochemical quenching mechanism, in which the triplet state is involved, dominates in semiquinonoid dyes of highest triplet ground**

**state probability. Energy- and time-resolved electron-carrier state spectroscopy in combination with density functional theory (DFT) calculations was used to validate the experimental mechanism. A quenched emission band as a signature for the triplet state character is observed in the delayed time-resolved photocurrent anisotropy spectra of the semiquinonoid compounds. On one hand, this study sheds light on the driving forces that regulate electron transfer (or charge separation) in the photochemical**
