Date New, exported or portable VBRUN300.DLL format designed to work with the File Exporter version 1.1 or later. This newest version has both new features and more sophisticated methods of searching for a desired file. Newer export format is an improvement over the older, non-portable and unstable VBRUN300.DLL format. When it works, it should work in the same way as the older format, but it should also let you add, edit, and delete file details, and it will properly index most message formats. The VBRUN300.DLL export format is a good choice when exporting a large number of Morse Code files (for instance, over 1,000 file). The export format will be detected as a 'compressed' file type and this will allow the files to be easily opened in most ZIP, 7-zip, etc. decoders. Hopefully, this format will soon become more stable and user-friendly. If it doesn't, please let us know and we'll look into it. Future modifications will hopefully include support for SMS encoding and decoding, and will allow for importing or exporting codebooks as text files, as well as having a more intuitive interface.
