Just follow this list, which I've painstakingly broken down into an orderly list for your convenience. 1. Save the image. When you're ready to save your image, you will need to save it as a JPEG file so that you can manipulate it with Photoshop. Right-click (Windows) or Control+click (Mac OS) the image and choose Create ⇒ New. Use the Large Format (JPEG) option when you choose Save in Save for Web & Devices (JPEG) from the Format drop-down menu and save the image in the Append option. Rename the file if desired. When you save your image, choose a quality setting. The quality settings are for file quality, which is the best compromise between file size and image quality. For a low-quality image, the file size is small and the image quality is poor. For a large-quality image, the file size is large and the image quality is excellent. Click OK to save the changes to the image. If you're inexperienced and are unsure whether the file quality is right for your image, you can always save it and make your changes later. 2. Open the file in Photoshop. After saving the image, click Open in Adobe Photoshop to open the image in Photoshop. 3. Choose a photo-editing program for final enhancements. Photoshop is the standard, but other programs are available as well. Photoshop is the industry standard because it's the most popular program. There are less-expensive programs such as Adobe Creative Suite, which includes Acrobat (for document preparation), FreeHand (a graphics and drawing program), and Flash (for animation and illustration). You also can

While most of the desktop graphics editors allow you to share your image via Facebook, Twitter, or other social networking sites, Photoshop requires you to create a Web link rather than an image link. You can have a link to a Web page on a web server and that link can take you to the image on that server. The image can be hosted in the Cloud, which is when the image is stored on an online server which can be accessed anywhere. Web links can be short or long and can have a unique URL. Similarly, desktop editors allow you to create a link to that image that can be clicked on and result in the image opening in a separate window so that you can view the image and see the edits you have made on it.
