1. This is a Fantasy game. The player assumes the role of one of the six heroes of the Rings of Elden, the original inhabitants of the Forgotten Continent. The main plot of the game revolves around the quest of the hero to prove his/her worth as an adventurer. During the quest, the player will be able to enjoy both large-scale epic battles and seamless adventure. 2. Two-dimensional Fantasy World. The land, the people, and the monsters are all depicted two-dimensionally. The different direction and angles are clearly distinguished. 3. Beautiful Game Design. We tried to put a game that would give the impression of solid 3D, but the 3D effect is not realistic. 4. "The Game is as Different from Other Games as a Final Fantasy Game." The core gameplay and combat system are deeply different from other RPG games. 5. Famous Award-Winning Studio Koalabs is a new world-renowned game company, with several million copies of games sold. Our games "Sword Art Online" and "Re:construction of Megalomaniac on Densetsu no Stafy" have won numerous awards at the Japan Game Awards and other award ceremonies. 6. A large scale story that involves the whole world. The game begins in the distant past, and the hero is sent forth in search of his/her homeland. It is the story of a return to the past and the search for his/her true self. SPECIFIC FEATURES: ■ Towering Stories. With the development of

The core gameplay uses both action and RPG elements that immerse the player in a fantasy setting of action, while the RPG elements allow for customization. ■ Powerful, Compelling Gameplay. How to download the free ELDEN RING 2. Is this official game? 3. Can i make profit from this game?Q: How to show a fragment shader that opens with a page flip? Hi so I'm trying to show a fragment shader like the following. // Convert Y-position from clip space to clip-space projection coords float yy = 1.0f - (nearPlane \* pow(tan(angle), 2.0f)); gl\_FragCoord.y = yy \* (float(0)); how would I do this? Do I just write the gl\_FragCoord... section out in the fragment shader and call it directly? I don't want any lighting/colors/anything. Just the layout and depth of the page with the content, shifted by some amount. EDIT: gl\_FragCoord.xy = half\_width \* (float(0) + float(page\_id) \* -half\_width); gl\_FragCoord.z = half\_height \* (float(0) + float(page\_id) \* -half\_height); What's that? I don't get the half\_width and half\_height? A: Ah I think I got it. I just got it working by turning on lighting as well as texture and using some tricks in gl\_FragCoord to do the page flipping. gl\_FragCoord.x = -half\_width + half\_width \* sin(angle); gl\_FragCoord.y = -half\_height + half\_height \* cos(angle); gl\_FragCoord
