WOW, I got some great "passive income" today after being able to buy a 3dmax trial-try this, but in progress yet in a few weeks or so to be released. Big money from no money. In the meantime, the torrent page is dead, and the initial impulse is to think that this product is being given away free, or lost. This is not the case. Sierra Ross is to me, the gold standard on the softmath side. It has all the simplicity, polish, and time tested algorithms as any other. However, a few years back, it has a simple lack of memory and has to operate with lower quality in memory. This was met with the time tested algorithms, structured as a single threaded environment. But guess what? Sierra Ross' algorithms are spectacular! Go, check it out. It is available as 32/64 bit for Windows, Linux and MacOS X. Here is a link to the page I got it from Hope you like it, and godspeed. Peace. I have a tiny problem with a few friends, they all have 2012 and I have 2011 on Win7x64 and I cannot make a 2012 license key for them so I would like to have the old one to use it as a trial key until new one is ready..
