Each unique timestamp is grouped by a 'channel'. I would like to time-series the last 4 seconds worth of data for each channel. I have been trying to use pandas apply function to do that, but I am getting an error message: pd.DataFrame({'channel': ['a', 'a', 'a', 'a', 'a', 'a'], 'value': [10, 11, 12, 13, 14, 15], 'timestamp': [0, 0, 0, 0, 0, 0, 1, 1, 1, 1, 1, 1, 2, 2, 2, 2, 2, 2, 3, 3, 3, 3, 3, 4, 4, 4, 4, 4, 4, 5, 5, 5, 5, 5, 5]}) timestamp value channel 0 0 10 a 1 0 11 a 2 0 12 0cc13bf012

Find out exactly what is new in the current version of Tanner tools by reading about Tanner tools by Chris Tanner on our new features page.Impressions, Inc. Impressions, Inc. was a computer software company founded by Scott Adams and Alan Perlis in the

mid-1970s. Adams and Perlis had worked together at the Computer Corporation of America. Impessions sold the first commercial version of PERL in 1978 for $695. A successful and generally influential interpreter, the first version of PERL came in the catalog of the three largest computer companies in the USA. In addition, it became the first "distributed" operating system, running on the Honeywell 6000 computer (the forerunner of the Honeywell 600 series) in 1977. It was an early and pioneering "distributed" operating system, in which the CPU core and control unit were both located on the same system. This allows several CPU cores to be integrated into a single system unit. In the late 1970s and early 1980s, it became a common practice for operating system writers to use the name of the interpreter as a generic name for the language that the interpreter implements. Perl began to be known as the "ImpressionOS", which has become a historical reference to the company. The usage of PERL as a generic term for programming languages was a result of the company's advertising campaign using the name "PERL", when the original name was known to be "Imperal". PARTICLE™, an ideal for the design of advanced structural parts such as plates and beams. Our technology offers a comprehensive solution to the challenges of design andInfluence of cell culture age on in vitro toxicity, bioaccessibility, and oxidative stress in HepG2 cells. Although the in vitro cell culture is generally considered a surrogate of in vivo conditions, numerous studies have shown that several xenobiotics present more toxic effects in younger cultures, due to phenotypic changes. The bioavailability and bioactivity of bioactive compounds may be altered as a result of cellular metabolism, which may make of them more or less toxic to cells. Thus, the objective of this work was to assess the

influence of in vitro cell culture age on cell viability, bioaccessibility, and oxidant status of three isoflavones [daidzein (DAI), genistein (GEN), and glycitein (GLY)] in HepG2 cells. For this purpose
