nVidia GeForce Graphics Driver for Windows Vista 64-bit. nVidia GeForce Graphics Driver for Windows Vista 64-bit.. ION LE (Desktops).. Bring out your inner gamer and get the most out of your games with the latest drivers from NVIDIA.Q: How to convert.py to.npy (Numpy array)? I would like to convert my python code to a.npy array for example if the code is import numpy as np a = np.array([1, 2, 3, 4]) print(a) and if you put above code in your command line, it will print [1 2 3 4] I would like to do this using python. How can I do this?

Thanks A: Convert the code to a.py script first. and then you can use numpy.save or numpy.savetxt to save it as.npy file. A: To save a numpy array from python you use np.save, which takes a string containing the name of the file you wish to save as, which could be the filename, in the first case. import numpy as np a = np.array([1, 2, 3, 4]) np.save('test.npy', a) If you wish to write your own functions which requires numpy arrays, you should wrap them within the np.save wrapper function, like this: def my\_func(a): # code return... np.save('test.npy', my\_func(a)) If you want to convert a string containing the contents of a numpy array, you can use numpy.loadtxt which you can call like this: import numpy as np a = np.array([1, 2, 3, 4]) data = ['1,2,3,4'] np.loadtxt(data, delimiter=',', dtype='float32') A: If you want to save variable directly without assign it to other variable and want to know how to use what you've got just use this. print("{}".format(my variable)) my variable = a

A: That nVidia driver (at least the one for Windows 8.x) is built with a specific OpenGL API. It also exposes the exact version of that API to the driver, which in turn exposes it to the application (games). If the driver is using the OpenGL 3.2 API, for example, then the game must be using OpenGL 3.2 as well. Similarly, if the driver is using an OpenGL version with a fixed function API (4.x), then the game must use a fixed function API (or fallback to software rendering). If the

print("{}".format(my variable)) 0cc13bf012

game doesn't mention any minimum OpenGL API version, then it means that it is not bound to any specific API version. In this case, the driver does not have any way of knowing the minimum API version which is required to run the application. That's why the driver always loads the latest driver, which in your case is version 327.23. The solution is to force the game to use OpenGL 3.2 or below. You can force the minimum API version by selecting OpenGL 3.2 as the display API before launching the game, in the Windows System Control Panel. Alternatively, you can force the version of OpenGL which the game uses to be OpenGL 3.2 or below, by installing the latest driver for your GPU. Keep in mind that forcing the OpenGL API version is not always the right solution, depending on the specific requirements of the application. Q: Cannot execute oracle sql with php I have some tables that I want to insert data on it. I want to use php but I can't do it. I wrote this: \$sql= "INSERT INTO TEMP (user, pass) VALUES (?,?)"; \$stmt = oci parse(\$connection, \$sql); oci bind by name(\$stmt, "?", \$user); oci\_bind\_by\_name(\$stmt, "?", \$pass); \$status = oci\_parse(\$connection, \$\$ql); oci bind by name(\$status, "?", \$status); But I got this error: ORA-01008: not all variables bound ORA-06512: at "SYS.DBMS SQL", line 859 01008. 00000 - "not all variables bound" \*Cause: The variable binding does not
