Olympus OM-D Mark II As I mentioned earlier, the best lens you can get for your DSLR is one that focuses as close as possible for low-light photography. In addition, an increasing number of people are using lenses for their point-and-shoot cameras for low-light photography. If you want to make sure your camera is always up to date, you can purchase one of the Olympus OM-D Mark II cameras. The OM-D series has many features. But the one that will benefit you most in taking low-light photos is its close focusing technology. You can achieve a maximum magnification of 3.9 times. Another benefit with the OM-D series is the ability to use Olympus's new image processing technology, which allows Olympus to perform more "Wow" photography that eliminates the need for a lot of post-processing. As for the OM-D Mark II, it has a Micro Four Thirds sensor that uses a 25.5×16 mm size. This size sensor is approximately half the size of a full-frame sensor. So, if you are buying the OM-D Mark II, you will spend less money on larger lenses. Olympus offers the OM-D Mark II in two versions, with or without EVF. The

The 2016 Ford F-150 body-on-frame (BOM) models come with an integrated grille and headlights which increase the vehicle's aerodynamic effects. The Ford F-150's new aerodynamic system is the first in the current full-size truck segment. The 2016 Ford F-150's integrated grille is more than a body sculpting device – it also increases the front air drag of the vehicle – which translates to a better fuel economy and lower emissions than previous models. According to Ford, the 2016 F-150 integrated grille has a net drag reduction of up to 0.4 and 0.6 for the V6 and V8 models, respectively. Another aerodynamic feature of the 2016 Ford F-150 comes in the form of a standard skid plate. The skid plate is attached above the grille, and its purpose is to reduce air pressure under the bumper. This reduces lift, which decreases the drag created by the air pressure. The Ford F-150's skid plate has been reduced and eliminated when the 2015 Transit Connect/TRAX crossover model was released. Even when manufacturers have adopted this standard, not all of them are providing similar numbers in their lineup. Honda, for instance, has an anti-lift integrated skid plate on the 2016 Honda CR-V. The CX-5 also has a skid plate for 2016. There's no skid plate for the 2016 Ford F-150 yet, but the vehicle's predecessors had skid plates that added up to an average of 0.6 weight to the vehicle. The F-150's body-on-frame chassis provides the model with strength and durability in addition to improved aerodynamics. The chassis is comprised of a wide, solid steel frame. It can handle rough roads and different terrains better than a light-duty vehicle. The F-150 has a tow rating of up to 10,000 pounds, which is double that of the 2014 F-150. The F-150 is known for its muscular exterior, and it will also feature a powerful exterior. The V6 and V8-powered pickup models will have a "CrewMax-inspired" design. The facelift for the F-150 will also give the model a sportier look, with new horizontal creases on its tailgate, more functional lights, and a raised bed.

Promise Me (fairy tale) "Promise Me" is a fairy tale collected by Joseph Jacobs in his book English Fairy Tales. Synopsis A prince was sent to a faraway place with his eight brothers. On his journey, he arrived with a single rose, and he was to return for them when his father and mother called him. He kept the rose, and though he was tossed around, and forced to drink milk that made him sick, he did not lose the rose. He left without the other brothers, and upon arriving, the queen called for him, and said he had done well to come back, since she had been given no warning of his return, and he was the last to come. Theophylline, dopamine and/or furosemide were administered to healthy volunteers in order to determine if these agents, alone or in combination, would affect immunoglobulin production or lymphocyte transformation. Of 18 subjects 18 blood specimens were analyzed for immunoglobulins IgG, IgM, IgA and complement factor C3 by radioimmunoassay. Of these 18 individuals nine were controls, eight received theophylline, eight received dopamine, and eight received theophylline plus dopamine. In addition, nine subjects received furosemide. After a 72 hour rest, the subjects were infused with phytohemagglutinin (PHA) and concanavalin A (Con A). Both PHA and Con A primed lymphocytes were cultured for 96 hours with or without theophylline, dopamine, furosemide, or theophylline plus dopamine or furosemide. Over all, theophylline alone (112.6 +/- 2.4 ng/ml) depressed the concentration of IgA significantly (p less than 0.001), whereas furosemide (435.6 +/- 4.8 ng/ml) elevated the concentration of IgA significantly (p less than 0.001). Dopamine alone (256.2 +/- 11.6 ng/ml) had no significant effect on the levels of immunoglobulins, with or without theophylline administration.Q: Upgrading Solr from 1.4
