The commercial software you purchase is designed to work with the application's interface. You are required to pay for access to the application and its features, as opposed to learning to use free, open-source alternatives. Photoshop is the most common software used for digital image manipulation, but it is certainly not the only option available. Other applications include: Free or open source image manipulation programs: GIMP, The GIMP Toolkit, or GIMPshop, all of which are available in many editions. GIMP, for instance, is free and open source, while GIMPshop is available as a commercial upgrade. If you already use GIMP or GIMPshop, you won't have to spend any extra money to upgrade to the commercial version. Adobe Photoshop Lightroom: Adobe Lightroom is Adobe's image editing and management package. It is very popular among photographers. Adobe Photoshop Elements: Adobe Photoshop Elements is the starter version of the desktop version of Photoshop. It is ideal for casual photographers who want to edit their images without spending a ton of money. Adobe Photoshop Plus: Adobe Photoshop Plus is a popular desktop version of Photoshop geared toward businesses and pros. It is an upgrade to Photoshop CS4 and much more powerful than Elements. Flash: Flash is Adobe's server-based video editing program that enables uploading and sharing of videos via the Internet. Photoshop Design Premium includes Flash 10.1, making it easy to design and create videos. Captivate: Captivate is Apple's screen recording software. It is a powerful screen recording tool that is also a visual storytelling and screencasting tool. If you have an Apple device, it is good to know that Captivate is built in to the Photos app in iOS 7, so it is easy to share clips on social media and other tools such as Facebook and Twitter. KompoZer: KompoZer is a free open source image manipulation program. It is similar to Photoshop in some ways but lacks the power of Photoshop. Although you can't "Photoshop" anything, you can "pick and mix" elements from multiple programs to produce unique images using your computer's built-in controls. In this chapter, we offer step-by-step tutorials for Photoshop to give you a basic understanding of the interface and commands and to give you the basics of using Photoshop's features. Everyone has heard of the famous, and somewhat hated, Adobe Photoshop. Photoshop is an image editing software developed by Adobe, and it's the most used software on the market. Photoshop is known for being an extensive package with a huge learning curve, high price and a lot of weight, but if you want to edit images on your Mac you don't have a lot of choices in the Mac world. There are a few Mac photo editing software options, but they are all complete overkill for a simple image. Photoshop Elements is one of the few Mac photo editing software that is designed for the Mac. While it doesn't have the same graphical capabilities as Photoshop, it does have the same features. It has the same features as the professional version of the software, but it has fewer options and a simpler UI. While Photoshop may be the world's best image editing software, if you don't want to spend $600, you can get a good professional software for half the cost. 7 Best Photoshop Elements Alternatives for Mac: It� 05a79cecff

Giant sloth pelt is a $3,000 premium in a 2,500-square-foot showroom Feathers are keeping the sloths warm in a shimmering $3,000 sloth pelt. By Miles From Holloway A shimmering $3,000 pelt made of manila and gold will wow visitors to a new Saks Fifth Avenue showroom when it opens its doors in the on-ramp of the Sepulveda Pass, in downtown Los Angeles. The new showroom, at 301 E. Century Blvd., will house an extensive product inventory, from sloth-print housewares to yoga wear and faux fur. Sloth pelt designer Linda Dillinger set up shop here, about a decade ago, partly inspired by the fact that the giant sloth is the only mammal that can't swim. "I wanted to find a way to connect the showroom with the obsession of the animal in people's lives," she said. "And I love the fact that the sloth is a creature most people wouldn't put in their bathtub." Dillinger hand-dyes, rings down, cuffs up and buttons up each sloth pelt. The belly of the animal is lined with a subtly folded gold cloth, done in pleats reminiscent of boat sails. "People have seen this pelt in person on the TV, but they really can't imagine what it feels like." Sloth pelt and pajama maker Simonhia Williams, who designed the pajama set, said Saks' "live show" feature was the perfect fit for her business. "I'm in this industry because I love animals," she said. "I was creating something really luxe and fit for real people — and this was a great place for me to showcase my personality and talent." Williams is not the first person to produce clothing from a sloth. "Sloth" by Studio Id, which has a retail store in Los Angeles, has been making "soft, furry" clothing for about a decade, according to the website. That was until Facebook's launching of F8, a new social network for online clothes shopping. The platform asked its marketing team to come up with
