started. Paediatric urinary tract infections: are they underdiagnosed and undertreated? To assess the diagnosis and management of children with urinary tract infection. Retrospective review of case records. University of Sheffield Teaching Hospitals, a district general hospital serving a rural area. Patients who presented with urinary tract infection and were seen in a paediatric out-patient clinic between September 1996 and December 1998. Diagnosis and management of patients. Sixty-five patients were identified. Half of these children had a previous diagnosis of reflux nephropathy. Sixty-one children (94.9%) had a culture taken which was positive in 59 (90.8%) cases. The majority of children were treated with cotrimoxazole. Paediatric out-

patients with urinary tract infection are usually diagnosed. Many children with suspected reflux nephropathy may have, in fact, had a urinary tract infection. Sixty-one children were diagnosed, but only 59 were treated. Use of culture to establish the diagnosis and treatment of urinary tract infection should be used routinely in all children with this common condition
