ACCA PRIMUS NEXT GENERATION TRIAL V.1.3.5, Acca primus next generation TRIAL V.1.3.5, (the part of U_n that is reachable in n steps from x), it follows that $|U_n| \sim \frac{3^n}{n+1}$ and thus, by Theorem [thm:Miyamoto], that the Grigorchuk group has exponential growth. Note that the fact that the Grigorchuk group has exponential growth implies that the word length in the Grigorchuk group is exponential. A nice explicit formula for the word length in the Grigorchuk group was established in [Dicks] (see also [Nekrashevych], Theorem 4.2.11). It is not known whether there exist finitely generated groups with exponential growth and linear isoperimetric function. The word problem in the Thompson group T is decidable. This follows immediately from the fact that the word problem is decidable for the lamplighter group. Does the word problem in the Grigorchuk group have a decidable procedure? Note that the conjecture above is known to hold if the Grigorchuk group is finitely generated, [Nekrashevych]. It would be interesting to know whether this conjecture also holds for infinite, non-finitely generated groups. Is the isoperimetric function of the Grigorchuk group $f(n)$ quadratic? Finally, let us mention that there exists an infinite, finitely generated group with linear isoperimetric function.
