Lightroom 5 sports a new feature called the Dark Room. It is what the name tells you, it darkens your image to control the exposure, shadows, highlights, and more, for stunning results. Feature	Balancing
Highlights and Shadows	Highlights and shadows can be reduced or adjusted
Exposure	This allows for greater control over the exposure of an image. Exposure can be adjusted by two ways: Sliders (controlling the curve, which is what you'd expect) and sliders that give you various gradations of values through which you can adjust

The intent of this review is to give you the latter half of the story, the stuff that is yet to be released, the future, as it were. I will not be looking at the core set of features and how they perform, but I will do a quick review of its functionality, comparing it to the latest version of Photoshop. I will then detail some of the best new features it provides. I found Adobe Photoshop Lightroom 5 to be the best version of Lightroom to date if you are looking for excellent control and organization of images that are the result of your work. As I have drawn myself deeper into this software, I find it difficult to believe that my long-time workflows and use have not changed as I have found new ways to to achieve the results that I need. I also find it astounding that this version is so good at such a variety of new and unusual things. Serial shooters can benefit from it in several different ways; casual hobbyist users will appreciate the new features; and even professional photographers will benefit from the convenience of this software.
