And on to the Apple Pencil Adobe Photoshop Review I've since found digital art supervisors doing art direction, designers, and web graphic design are taking advantage of the iPad Pro. Maybe not in the big city but in rural areas, people are using the iPad Pro to produce illustrations for things like a map or schematic for a new store. This was a fairly difficult task prior to the iPad and the Apple Pencil and the methods that allow to import a graphic from a source like the [**link] on to a sample image allow one to create stylized artwork with ease [link]. Whether this becomes a way to return to the dark ages or a mainstay of digital art creation, I'm not sure. But I personally do not understand the need to take a pencil and a tablet to the office. My alternatives to this design are paper based and they do not always cut it. Yes, we can lay the images on notepads and try to recall the stylized drawings … but there are always people on a layout to ask questions. While paper is the most rudimentary form of most of our graphics, it is not always the fastest. If the art director, web designer, or others involved with the creation of art receive something via email, it is worthwhile to create a link that takes them to the iPad Pro and the image on that tablet. They can then modify the image (like a designer would) or let others make suggestions to the artist. It's like a photo sharing wall within the company. That may eventually become a necessity and the print industry may end up fighting back and overcome that feature.**

The move to an online subscription, as opposed to the freemium ad-supported versions from years past, is expected to increase efficiency for artists by streamlining their workflow. Adobe has also announced plans to make the subscription available to individual designers and creatives through updates to its marketplace on InDesign, Figma, and Adobe XD. The company is working on implementing a One-to-One project collaboration and version management feature for Creative Cloud, which will eventually enable owners of individual creative portfolios to manage and build workspaces collaboratively with anyone with the service, including other registered owners of individual portfolios. Adobe Places Libraries will be expanded with the Contribute feature. Contribute will allow creators to share, search, and collaborate on workspaces, and continue contact with a link to the project that contains the library while they're away from their workstation. With Project Generator, users can combine assets from across a set of connected workflows — including Adobe XD, Illustrator, Photoshop, InDesign, and After Effects. The feature will let users design wireframes, folders, and documents from the set of pre-built assets. More modern tasks within Adobe XD are also planned for the future. Like Adobe Cloud Draw, which lets users create line drawings and then apply them to an image, Photoshop UI improvements in the future might let users quickly select existing shapes, adjust their sizes, and modify them as they go along.
